

Quality

Sunday, 03 March 2013 18:22 - Last Updated Sunday, 17 March 2013 11:09

SNIM's products contain no contaminants (phosphorus, alumina), and have a good reputation on the market.

SNIM carries out quality control throughout the entire production line:

- blasting holes
- storage plants in Zouerate
- ore freight trains
- plant inventories in Nouadhibou
- ship loading

The samples taken are analyzed at the **Zouerate central laboratory**, which has two modern Fluorescence X analysis devices.

The Nouadhibou laboratory enables the content of cargo being loaded at the port to be monitored in real time.
